SPECIFICATIONS

Item	Content
Dimensions	36.0cm(W) × 39.4cm(D) × 33.4cm(H)
Weight	16.0kg
Color system	PAL/SECAM system
Power input	AC 220 - 240V, 50/60Hz
Power consumption	Max. 68W
Picture Tube	15" (measured diagonally), 90° deflection, in-Line gun, data grade tinted CRT tri-dot pitch 0.499mm
Screen Size	284mm(W) × 213mm(H)
Scanning frequency	(H) 15.625KHz (V) 50Hz
High voltage	24kV (at zero beam current)
Horizontal resolution	More than 450 lines
Speaker	4.5cm round (16Ω) × 1
Audio output	0.75W
INPUT A	
VIDEO	BNC × 2 (IN/OUT), Bridged connection is possible. VS-1Vp-p, 75Ω, negative
AUDIO	A termination switch is provided. (75Ω/OPEN) RCA pin connector × 2 (IN/OUT), Bridged connection is possible. 390mVrms, High impedance
INPUT B	
VIDEO	8-pin connector × 1 VS-1Vp-p, 75Ω, negative
AUDIO	775mVrms, High impedance
Y/C INPUT	
Y/C	7-pin connector × 2 (IN/OUT), Bridged connection is possible. Y-VS-1Vp-p, 75Ω, negative C-0.3Vp-p (burst), 75Ω A termination switch is provided. (75Ω/OPEN)
AUDIO	RCA pin connector × 2 (IN/OUT), Bridged connection is possible. 390mVrms, High impedance
ACCESSORY	Power cord (approx. 2.4m) × 1
OPTION	RK-150E (RACK MOUNT ADOPTOR)
FUSE	QMF51E2-3R15S (3.15A)

Design & specification subject to change without notice.

SAFETY PRECAUTIONS

1. The design of this product contains special hardware, many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the products should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. **Electrical components having such features are identified by shading on the schematics and by (⚠) on the parts list in Service manual.** The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list of Service manual may create shock, fire, or other hazards.
4. **Don't short between the LIVE side ground and NEUTRAL side grounding or EARTH side ground when re-pairing.**
Some model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE (⊥) side GND, the NEUTRAL (↗) side GND and EARTH (⊕) side GND. Don't short between the LIVE side GND and NEUTRAL side GND or EARTH side GND and never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and NEUTRAL side GND or EARTH side GND at the same time. If above note will not be kept, a fuse or any parts will be broken.
5. If any repair has been made to the chassis, it is recommended that the B₁ setting should be checked or adjusted (See ADJUSTMENT OF B₁ POWER SUPPLY).
6. The high voltage applied to the picture tube must conform with that specified in Service manual. Excessive high voltage can cause an increase in X-Ray emission, arcing and possible component damage, therefore operation under excessive high voltage conditions should be kept to a minimum, or should be prevented. If severe arcing occurs, remove the AC power immediately and determine the cause by visual inspection (incorrect installation, cracked or melted high voltage harness, poor soldering, etc.). To maintain the proper minimum level of soft X-Ray emission, components in the high voltage circuitry including the picture tube must be the exact replacements or alternatives approved by the manufacturer of the complete product.
7. Do not check high voltage by drawing an arc. Use a high voltage meter or a high voltage probe with a VTVM. Discharge the picture tube before attempting meter connection, by connecting a clip lead to the ground frame and connecting the other end of the lead through a 10kΩ 2W resistor to the anode button.
8. When service is required, observe the original lead dress. Extra precaution should be given to assure correct lead dress in the high voltage circuit area. Where a short circuit has occurred, those components that indicate evidence of overheating should be replaced. Always use the manufacturer's replacement components.

9. Isolation Check

(Safety for Electrical Shock Hazard)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the cabinet (antenna terminals, video/audio input and output terminals, Control knobs, metal cabinet, screwheads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

(1) Dielectric Strength Test

The isolation between the AC primary circuit and all metal parts exposed to the user, particularly any exposed metal part having a return path to the chassis should withstand a voltage of 3000V AC (r.m.s.) for a period of one second.

(... Withstand a voltage of 1100V AC (r.m.s.) to an appliance rated up to 120V, and 3000V AC (r.m.s.) to an appliance rated 200V or more, for a period of one second.)

This method of test requires a test equipment not generally found in the service trade.

(2) Leakage Current Check

Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.) Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5mA AC (r.m.s.).

• Alternate Check Method

Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.). Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500Ω 10W resistor paralleled by a 0.15μF AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.). Measure the AC voltage across the resistor with the AC voltmeter. Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.35V AC (r.m.s.). This corresponds to 0.5mA AC (r.m.s.).

Fig.A

CARACTERISTIQUES TECHNIQUES

- Type**
Système couleur : PAL/SECAM
Tube image : 38 cm (mesuré en diagonale), déviation de 90°, canons à électrons en ligne, teinte data-grade. Taille des points triples 0,489mm
: 0,75 W
- Sortie audio**
Haut-parleur : Rond de 4,5 cm x 1
Taille de l'écran (HxV) : 284 x 213 mm
Fréquences de balayage : (H) 15 625 kHz
(V) 50 Hz
Résolution horizontale : Plus de 450 lignes
Alimentation : 220 - 240 V CA, 50/60 Hz
Consommation : Max. 88 W
INPUT A : VIDEO - BNC x 2
VS - 1 Vcc, 75 ohms, synchro négative, recordement en sonde possible.
(Un commutateur d'extrémité est prévu.)
AUDIO - connecteur à broches RCA x 2, 380 mVrms, haute impédance, recordement en sonde possible.
INPUT B : Connecteur à 8 broches x 1
VS - 1 Vcc, 75 ohms, synchro négative
AUDIO - 775 mVrms, haute impédance
INPUT Y/C : Connecteur à 7 broches Y/C x 2
Y - 1 Vcc, 75 ohms, synchro négative
C - 0,3 Vcc (burst), 75 ohms
Recordement en sonde possible.
(Un commutateur d'extrémité est prévu.)
AUDIO - 380 mVrms, haute impédance, recordement en sonde possible.
Poids
Accessoire : 16,0 kg
Cordon d'alimentation (environ 2,4 m) x 1

SAFETY PRECAUTIONS

In order to prevent any fatal accidents caused by misoperation or mishandling of the monitor, be fully aware of all the following precautions.

WARNINGS

To prevent fire or shock hazard, do not expose this monitor to rain or moisture. Dangerous high voltages are present inside the unit. Do not remove the back cover of the cabinet. When servicing the monitor, contact qualified service personnel. Never try to service it yourself.

Improper operations, in particular alteration of high voltage or changing the type of tube may result in x-ray emission of considerable dose. A unit altered in such a way no longer meets the standards of certification, and must therefore no longer be operated.

PRECAUTIONS

- Use only the power source specified on the rating label located on rear of the cabinet.
- When not using this unit for a long period of time, or when cleaning it, be sure to disconnect the power plug from the AC outlet.
- Do not allow anything to rest on the power cord. And do not locate this unit where people will tread on the cord.
- Do not overload wall outlets or power cords as this can result in a fire or electric shock.
- Avoid using this unit under the following conditions:
 - In extremely hot, cold or humid places,
 - In dusty places,
 - Near appliances generating strong magnetic fields,
 - In places subject to direct sunlight, and
 - In badly ventilated places.
- Do not cover the ventilation slots while in operation as this could obstruct the required ventilation.
- When dust accumulates on the screen surface, clean with a soft cloth.
- Unplug this unit from the AC outlet and refer servicing to qualified service personnel under the following conditions:
 - When the power cord is frayed or plug is damaged.
 - If liquid has been spilled into the unit.
 - If the unit does not operate normally following the operating instructions.
 - If the unit has been dropped or the cabinet has been damaged.
 - When the unit exhibits a distinct change in performance.
- Do not attempt to service this unit yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Always refer servicing to qualified service personnel.
- When replacement parts are required, have the service personnel verify in writing that the replacement parts he uses have the same safety characteristics as the original parts. Use of manufacturer's specified replacement parts can prevent fire, shock, or other hazards.
- Upon completion of any servicing or repair to this unit, please ask the service personnel to perform the safety check described in the manufacturer's service literature.
- When this unit reaches the end of its useful life, improper disposal could result in a picture tube implosion. Ask qualified service personnel to dispose of this unit.

Thank you for purchasing a JVC colour video monitor. Your new monitor will provide superior-quality pictures and incorporates many useful functions. To ensure a complete understanding of the monitor and to extend its service life, please read all Instructions in this booklet and keep it in a safe place for future reference.

FEATURES

- Multi-standard compatibility for a wide range of professional applications; accepting composite video, Y/C separate video input.
- 15-inch data-grade CRT, together with a comb filter for pictures with a horizontal resolution of more than 450 lines.
- Multi-function and superior flexibility with numerous facilities required by professional users including a under scan switch, pulse cross switch, etc.
- Mountable in a standard EIA rack with optional rack mount adapter RK-150E. (For mounting, refer to the instruction manual of the RK-150E.)

Safety Precautions	3
Controls and Connectors (Front Panel)	4
Connections (Rear Panel)	5
Connections Outline Diagram	6
Specifications	7
	8

CONTROLS AND CONNECTORS

(Front Panel)

① V. HOLD control
Turn to adjust the vertical synchronization of the picture.

② VOLUME control
Turn clockwise to make the sound louder. Counter-clockwise to make it softer.

③ Picture controls
Use to optimize the picture. The centre click position of each control is its standard setting. This standard setting can be varied (preset) by turning the SUB control screws at the side of the controls. Use a screwdriver to turn the SUB controls.

• **CHROMA control**
Turn to adjust the colour density of the picture to your preference.

• **BRIGHT control**
Turn to adjust the picture brightness to your preference.

• **CONTRAST control**
Turn to adjust the picture contrast to your preference.

④ SYSTEM switch
Switches the colour system when a video signal is input.

PAL () : For PAL colour system
SECAM () : For SECAM colour system

⑤ INPUT SELECT switches
Press to select the video signals input to the rear connectors. (Selecting the signals)

(1) Set the switch on the left to VIDEO or Y/C position.

VIDEO () : When monitoring a composite video signal

(via the INPUT A or INPUT B connector on the rear panel)

Y/C () : When monitoring Y/C separate video signals

(via the Y/C INPUT connector on the rear panel)

(2) While setting the left switch to 'VIDEO', set the switch on the right to A or B position.

A () : When monitoring a signal via the INPUT A connector

B () : When monitoring a signal via the INPUT B connector

⑥ UNDER SCAN switch
Press to switch the scanning size on the screen.

() : for overscanning
() : for underscanning

⑦ PULSE CROSS switch
To check the retrace period (sync signal) by delaying the phase of the input signal.

OFF () : For normal picture
ON () : For retrace period check display

⑧ COLOUR OFF switch
Switches picture between colour and monochrome for checking white balance, etc.

() : For a colour picture
() : For a monochrome picture

⑨ BLUE CHECK switch
Switches the picture between normal and monochrome blue for checking and adjusting the CHROMA.

() : Normal picture
() : Monochrome blue picture

Adjusting procedure
(1) Input the colour bar signal to display a monochrome blue picture.

(2) Turn the CHROMA control so that all blue bars have the same density and brightness.

⑩ POWER switch/Indicator
Pressing this switch turns the power on; the indicator lights. Pressing this switch again turns the power off; the indicator goes off.

⑪ PAL SUB CHROMA control
This is for service personnel only. Do not touch this control.

(Rear Panel)

● Power input connector
Connect to an AC outlet with the provided power cord.

● INPUT A connectors/Termination switch
Input connectors for composite video and audio signals and output connectors for bridge-connected signals.

IN : When inputting a signal
OUT : For bridged connection

Setting the termination switch
75 Ω : When there is only an input signal
OPEN : For bridged connection

● INPUT B connector
Input connector for composite video and audio signals from equipment that is provided with the same type of 8-pin VTR output connector.

● Y/C INPUT connectors/Termination switch
Input connectors for Y/C separate video and audio signals and output connectors for bridge-connected signals.

IN : When inputting signals
OUT : For bridged connection

Setting the termination switch
75 Ω : When there are only input signals
OPEN : For bridged connection

Caution: These connectors can only be connected to the Y/C443 connectors of the VTR; they cannot be connected to the other dubbing connectors (DUB, Y/C828, Y/C833, and etc.)

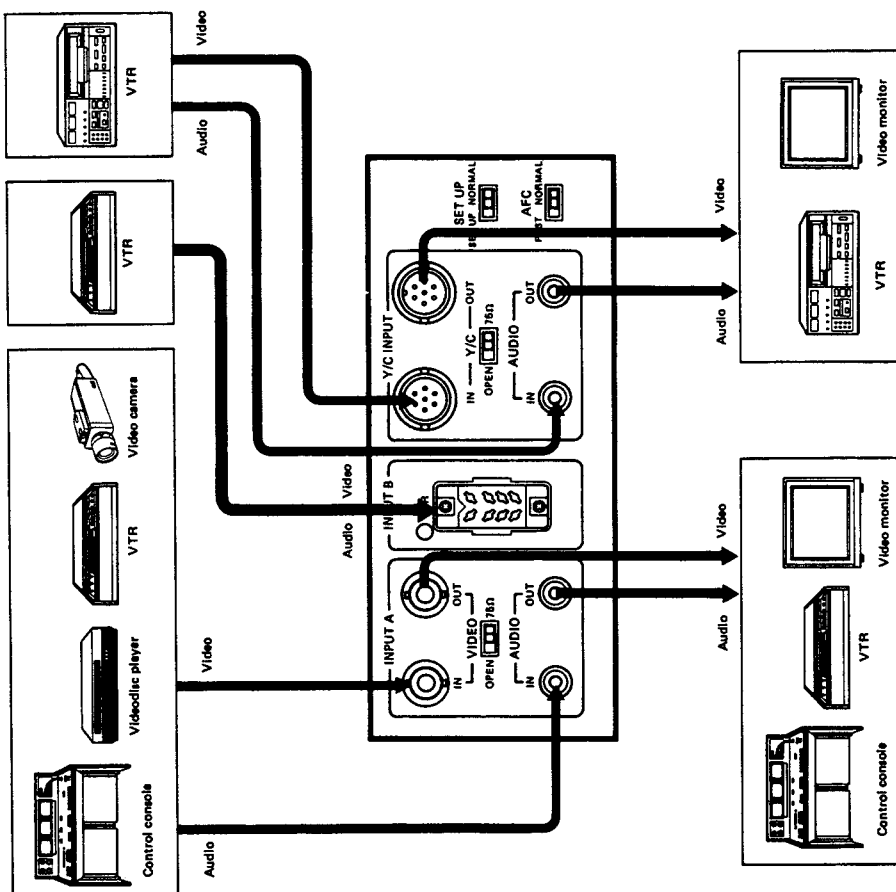

● SET UP switch
Do not reset this switch. It is for service personnel only.

● AFC switch
Switches the AFC time constant of the horizontal sync circuitry to correct the skewed portion of the picture.

FAST : Fast mode (Smaller time constant)
NORMAL : Normal mode

CONNECTIONS

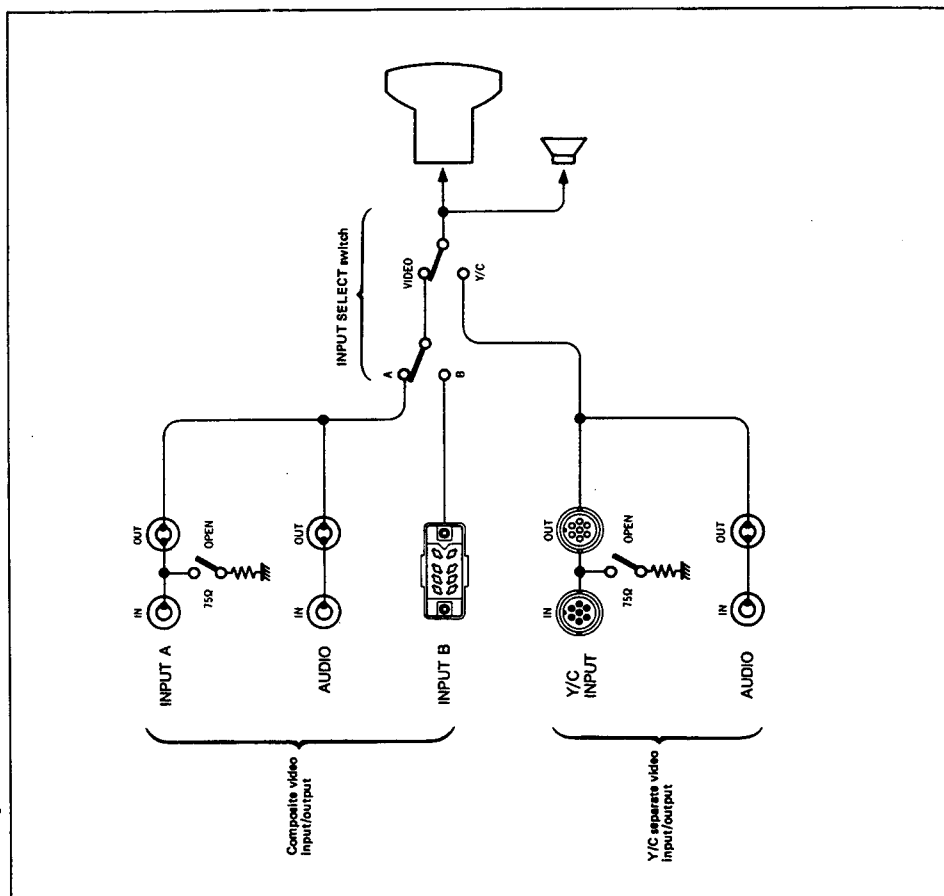

- Be sure to disconnect the power plug from the AC outlet before connecting to other equipment.
- Also refer to the instruction manual of the equipment to be connected.

- When using any of the OUT connectors (bridged output), set its termination switch to "OPEN".

CONNECTIONS OUTLINE DIAGRAM

The following is an outline of the circuitry and connections, showing concepts. It is not a circuit diagram.

SPECIFIC SERVICE INSTRUCTIONS

DISASSEMBLY PROCEDURE

1. Method of removing the top cover

- (1) Remove the two screws ① in Fig. 1.
- (2) Remove the respectively two screws ② and ③.
- (3) By pulling the cover a little bit backward, dismount the cover as indicated by an arrow.

Also remove the screw on the opposite side.

Fig. 1

2. Method of dismounting the rear cover

- Dismount the top cover.
- (1) Remove the two screws ④ in Fig. 2-1.
- (2) Pull the rear cover right upward until it stops as indicated by the arrow, and dismount the cover.

Fig. 2-1

For assembly,

- (1) Since the four positions ⑤ in Fig. 2-2 are hooked, align the hooks straight and let them move down.

Fig. 2-2

3. Method of dismounting Input PCB

- Dismount the top cover.
- Dismount the rear cover.
- (1) Remove the three screws ⑤ in Fig. 3.
- (2) Remove the GND wire.
- (3) When the two hooks between the Main and Input PCBs are removed, the Input PCB will be dismounted.
- (4) Dismount the connectors, etc. as required.

Fig. 3

4. Method of dismounting Power PCB

- Dismount the top cover.
- (1) Remove the wire clamp fixing the transformer on the Power PCB and PCB holder.
- (2) Remove the four screws ③ in Fig. 4 and dismount the PCB holder.
- (3) Remove the two screws ④.
- (4) After raising the Power PCB once, pull the lower part of the PCB outward and dismount the PCB.
- (5) Dismount the connectors, etc. as required.

Fig. 4

5. Method of checking the Main PCB

- Dismount the top cover.
- Dismount the rear cover.
- (1) Set the TV set sideways as shown in Fig. 5. In this case, lay soft cloth, etc. under the set in advance to prevent any damage to the exterior part.
- (2) Remove the four screws ① and dismount the bottom lid.
- (3) Shift the Main PCB as required.

Fig. 5 (Bottom surface view)

6. Method of dismounting front panel ass'y

- Dismount the top cover.
- Dismount the rear cover.
- (1) Remove the speaker chord (Main PCB [G]).
- (2) Remove the chord of degauss coil (Power PCB [I]).
- (3) Remove the two chords of deflecting coil (Main PCBs [H] and [V]).
- (4) Remove the anode cap.
 - **Pay attention to the high tension!!**
 - Since the cap will be electrified, be sure to remove the cap after discharging.
- (5) After removing the [CRT EARTH] chord, pull out the CRT socket PCB.

Fig. 6-1

- (6) When the four screws ① are removed, the front panel ass'y will be dismounted together with the CRT.
 - Since the CRT is heavy, remove the screws ① while holding the front panel ass'y.

Fig. 6-2

7. Method of dismounting speakers

- Dismount the top cover.
- Dismount the rear cover.
- Dismount the front panel ass'y.
- (1) Remove the speaker chord (Main PCB [G]).
- (2) Remove the two screws fixing the speaker to the front panel ass'y.
 - Unless the front panel ass'y has been dismounted from the TV set body, it is impossible to mount the speaker.

8. Precautions for wire clamp and binding band

- (1) The wire should be clamped exactly.
- (2) Be sure not to remove the binding band for wire treatment. Should it be removed, the wire should be treated exactly to the initial position.

SERVICE ADJUSTMENTS

PRIOR TO STARTING ADJUSTMENT

- Dismount the top cover, rear cover and bottom lid.
- Perform sufficient warm-up of the TV set and testers.
(for 30 minutes or more).
- Unless specified otherwise specially in [ADJUSTING STEP] given below, perform adjustment after setting the switches and VRs on the front panel to the following positions:
 BLUE CHECK : OFF
 COLOUR OFF : OFF
 PULSE CROSS : OFF
 UNDER SCAN : OFF
 SYSTEM SW : PAL
 INPUT SELECT : VIDEO A
 CONTRAST : CLICK position
 BRIGHT : CLICK position
 CHROMA : CLICK position
 PHASE : CLICK position
- Regarding the list of the layout of adjusted parts, refer to [ADJUSTMENT LOCATION] in [SCHEMATIC DIAGRAM].

TOOLS AND FIXTURES FOR ADJUSTMENT

- DC voltmeter or digital voltmeter
- Oscilloscope
- Pattern generator (PAL)
 - If monoscope signal can be output, it is possible to perform further accurate adjustment.
 - The signal should be input to VIDEO A.
- Color thermometer
 - Adjustment is possible without it. If available, however, further accurate adjustment is possible.
- Short jumper
- 10k Ω resistor

In addition to the above, the following tools are necessary to adjust the purity and convergence.

- Magnetic eraser
- Silicon bond (KE4866)
- REICHLOCK or G2 bond

ADJUSTING STEP

POWER PCB

Item	Measuring instrument	Test point	Adjustment part	Description
Adjustment of B1 VOLTAGE	PATTERN GENERATOR DC VOLTMETER or DIGITAL VOLTMETER	TP-91 TP-E(⚡)	R913(B1 ADJUSTMENT)	1. Input the total black signal. 2. Adjust the B1 adjust VR (R913) so that the voltage between TP-91 and TP-E (⚡) becomes DC 110V. 3. Confirm that the B1 voltage scarcely changes even when the input signal has been changed.

● TP-E
● TP-91

POWER PCB

● R913

MAIN PCB (1)

Item	Measuring instrument	Test point	Adjustment part	Description
Adjustment of PAL APC	PATTERN GENERATOR SHORT JUMPER 10 kΩ RESISTOR	TP-40 IC301 14Pin TP-92 TP-E	C320 C323 (DL AMP) C332 C331 C339	<ol style="list-style-type: none"> 1. Input the color bar signal. 2. Connect IC301 14Pin and TP-E with a short jumper. 3. Connect TP-40 and TP-92 with a 10kΩ resistor. 4. Adjust the COLOR SYNC. VR (C320) to a position where the color changes from a striped pattern to a color bar and remains at a standstill. 5. Connect the oscilloscope to TP-48 and TP-49, and plot the X-Y coordinates. 6. Adjust with R323 and R332, C331 so that the waveforms are the shapes shown from A to B in the chart below.  <ol style="list-style-type: none"> 7. When it is not possible to adjust with the two VRs, adjust with C339. 8. Input the half color bar. 9. Adjust with C320 so that the color at the center section under the color bar is at minimum.
Adjustment of NOCTH CIRCUIT	PATTERN GENERATOR OSCILLOSCOPE	TP-64 (Y)	C236	<ol style="list-style-type: none"> 1. Input the color bar signal. 2. Connect the oscilloscope between TP-64 and TP-E. In case the waveform can be expanded by the oscilloscope, expand the waveform to allow easy adjustment. 3. Adjust the C236 so that the CHROMA component becomes minimum. 

CRT socket PCB

Item	Measuring instrument	Test point	Adjustment part	Description
Adjustment of CUTOFF	PATTERN GENERATOR		R705 :R R715 :G R725 :B SCREEN VR	<ul style="list-style-type: none"> Continue running for 10 minutes or more. <ol style="list-style-type: none"> 1. Input the total white signal. 2. Turn the transverse one line [SET UP] switch (S203) on the rear surface over to the [SET UP] side. 3. Turn the [CUT OFF] VRs (R705, R715 and R725) on the CRT socket PCB fully in counterclockwise direction. 4. While turning the screen VR gradually in clockwise direction from full counterclockwise direction, search for the color appearing for the first time. 5. Turn the [CUT OFF] VRs, with which the color has appeared first in the Step 4, slightly in clockwise direction. 6. By turning the [CUT OFF] VRs for the other two colors in clockwise direction, adjust the intensity of the three shining colors so that the transverse single line look white. 7. Return the transverse single line [SET UP] switch (S203) to the [NORMAL] side.
Adjustment of WHITE BALANCE	PATTERN GENERATOR		R702 :R DRV R712 :G DRV	<ul style="list-style-type: none"> Continue running for 30 minutes or more. This adjustment should be performed after [Adjustment of CUTOFF]. <ol style="list-style-type: none"> 1. Input the total white signal. 2. Adjust the R and G DRIVER VRs (R702 and R712) on the CRT socket PCB to a position where the entire screen becomes white. 3. While turning the CONTRAST VR and BRIGHT VR on the front panel, make sure that the white balance is attained. <p>[In case monoscope signal and color temperature meter are available]</p> <ol style="list-style-type: none"> 1. Input the monoscope signal. 2. The light receiving unit of the color temperature meter will measure the color temperature at the center of the screen. 3. Adjust the CONTRAST VR, R and G DRIVER VRs (R702 and R712) on the CRT socket PCB to a position where the color temperature meter indicates a specified value. <ul style="list-style-type: none"> Color temperature : D9300°K ($x = 0.283$, $y = 0.297$) 4. While turning the CONTRAST VR and BRIGHT VR on the front panel, make sure that the white balance is attained.

MAIN PCB (2)

Item	Measuring instrument	Test point	Adjustment part	Description
Adjustment of SUB BRIGHT	PATTERN GENERATOR		R269 (SUB BRIGHT)	<ul style="list-style-type: none"> Continue running for 30 minutes or more. This adjustment should be performed after [Adjustment of CUTOFF]. Set the CONTRAST and BRIGHT VRs on the front panel to the clicking position. <ol style="list-style-type: none"> Input the color bar signal. Turn the V. HOLD VR to display the vertical flyback time and let it remain at a standstill. Adjust the SUB BRIGHT VR (R269) in front of the position where the vertical flyback time becomes black (In this case, be careful so that it will not become too bright). Adjust the vertical synchronism with the V. HOLD VR.
				
Standard setting of CONTRAST	PATTERN GENERATOR OSCILLOSCOPE	TP-47B TP-E	R265	<ul style="list-style-type: none"> This adjustment should be performed after [Adjustment of SUB BRIGHT] Set the CONTRAST and BRIGHT VRs on the front panel to the clicking position. <ol style="list-style-type: none"> Input the color bar signal (including 100% white signal). Turn the CHROMA VR on the front panel and turn the screen to black and white. Connect the oscilloscope between TP-47B and TP-E on the CRT socket PCB. Adjust the SUB CONT. VR (R265) so that the voltage of the waveform becomes 47.5V_{B-W}. Release the CHROMA VR on the front panel to return the screen to color.
				
Adjustment of CHROMA	PATTERN GENERATOR OSCILLOSCOPE	TP-47B TP-E	R345 (Sub PAL Chroma) R348 (Sub Chroma)	<ul style="list-style-type: none"> This adjust should be performed after [Standard setting of contrast]. Turn the CHROMA VR on the front panel to the click position. <ol style="list-style-type: none"> Turn the SYSTEM SW to SECAM. Input the SECAM color bar. Connect TP-47B of the CRT socket PCB to the oscilloscope. Turn R348(Sub Chroma) to adjust the white and blue levels. Return the SYSTEM SW to PAL. Turn R345(Sub PAL Chroma) to set the difference of white and blue to 0V.
				

Item	Measuring instrument	Test point	Adjustment part	Description
Adjustment of FOCUS	PATTERN GENERATOR		FOCUS VR	<ul style="list-style-type: none"> This adjustment should be performed after [Standard setting of CONTRAST]. 1. Input the cross hatch signal. 2. Adjust the FOCUS VR to a position where the vertical and horizontal lines of cross hatch become thinnest and clearest. <p>Note: Be sure to perform final adjustment of the convergence after adjustment of focus, since the convergence will be changed whenever the focus has been adjusted.</p>
Adjustment of HORIZONTAL SYNCHRONISM	PATTERN GENERATOR SHORT JUMPER	TP-33A	R505 (H FREQ.)	<ul style="list-style-type: none"> Set the CONTRAST VR on the front panel to the clicking position. 1. Input the color bar signal. 2. Connect TP-33A and TP-E with a short jumper. 3. Adjust the H. HOLD VR (R505) to a position where the image remains at a standstill without flowing horizontally. • Namely, adjust the VR to an intermediate position where the image flows horizontally. 4. Remove the connected short jumper. 5. Make sure that the color synchronism is not collapsed and normal image appears instantaneously when returned to the color bar signal again after changing the input select switch.
Adjustment of H PULSE	PATTERN GENERATOR OSCILLOSCOPE	TP-64 TP-70	C334 R379 (PULSE PHASE)	<ol style="list-style-type: none"> 1. Input the color bar signal. 2. Connect the oscilloscope to TP-64 and TP-70, set to the dual-trace and increase the SYNC section. 3. Adjust with C334 so that the SYNC forward line of the Y signal and the start of the H PULSE coincide.  <ol style="list-style-type: none"> 4. Confirm that the waveform phase does not slip even when the pulse cross SW is pressed. 5. If the phase slips, use R379 to adjust so that the H PULSE does not come to the left side (leading phase) of the SYNC of Y signal.

Item	Measuring instrument	Test point	Adjustment part	Description
Adjustment of H. AMPLITUDE and H. CENTER	PATTERN GENERATOR 		L501 S501 (H CENTER) L503 R527 (H POSITION)	<ul style="list-style-type: none"> This adjustment should be performed after [Adjustment of B1 VOLTAGE] and [Adjustment of HORIZONTAL SYNCHRONISM]. <ol style="list-style-type: none"> Input the monoscope signal or cross hatch signal. Select the [OVER SCAN] screen with the [UNDER SCAN] switch on the front panel. With the horizontal amplitude coil (L501) and [H. CENTER] switch (S501), perform adjustment so that 95% of monoscope pattern (cross hatch) is displayed on the screen. Select the [UNDER SCAN] screen with the [UNDER SCAN] switch on the front panel. Adjust the horizontal amplitude coil (L503) so that the distance from both sides of the CRT to the edge of image becomes 7 ± 3 mm. In case the image is chipped off from the raster, adjust the H. POSITION VR (R527). Select the [OVER SCAN] screen with the [UNDER SCAN] switch on the front panel.
Adjustment of V. AMPLITUDE, V. CENTER and V. LINEARITY	PATTERN GENERATOR 	 [OVER SCAN] screen  [UNDER SCAN] screen	R413 S401 R409 R412	<ol style="list-style-type: none"> Input the monoscope signal or cross hatch signal. Select the [OVER SCAN] screen with the [UNDER SCAN] switch on the front panel. Roughly adjust the V. HEIGHT VR (R413) so that nearly all the monoscope pattern (cross hatch) is displayed on the screen. With the V. HEIGHT VR (R413) and V. CENTER switch (S401), perform adjustment so that 95% of the monoscope pattern (cross hatch) is displayed on the screen. While turning the V. LIN. VR (R409), adjust the vertical linearity. Repeat the Steps 3 - 5 as required. Select the [UNDER SCAN] screen with the [UNDER SCAN] switch on the front panel. Adjust the V. HEIGHT VR (R412) so that the distance from upper and lower edges of the CRT to the end of image becomes 5 ± 2 mm. Perform fine adjustment of the center and vertical linearity so that displacement of adjustment will not occur even if the UNDER SCAN switch on the front panel has been changed over. Select the [OVER SCAN] screen with the [UNDER SCAN] switch on the front panel.
Adjustment of CHROMA DISCRIMINATION	PATTERN GENERATOR		T304 T305 [SECAM MODULE]	<ul style="list-style-type: none"> Continue running for 30 minutes or more. This adjustment should be performed after [Adjustment of white balance]. Turn the SYSTEM SW to SECAM. <ol style="list-style-type: none"> Input the SECAM color bar. Adjustment T304 and T305 so that the color of the white section remains the same regardless of whether the COLOR OFF SW is ON or OFF. <ul style="list-style-type: none"> Return the SYSTEM SW to PAL.

ADJUSTING STEP OF COLOR TONE

ADJUSTMENT OF PURITY

Adjustment Part	Description	Remarks
Wedge Purity magnet G cutoff VR R cutoff VR B cutoff VR Screen VR Deflecting yoke Traverse one line [SET UP] switch	<p>PRIOR TO STARTING ADJUSTMENT:</p> <ol style="list-style-type: none"> 1. Remove the wedge being inserted in between the deflecting yoke. At this time, clear the trace of the wedge. 2. Peel off the adhesive fixing six magnets with the tip of screw driver, etc. so that the magnets will turn freely. 3. Input the total white signal. 4. Perform magnetic erasing of the Brown tube with a magnetic eraser. 5. Set the brightness and picture to slightly higher levels, and perform warm-up roughly for 20 - 30 minutes. <p>ADJUSTING STEP</p> <ol style="list-style-type: none"> 1. By turning the G CUTOFF VR on the CRT socket board fully in clockwise direction and the R and B CUTOFF VR fully in counterclockwise direction, adjust the screen VR to make the green screen visible. 2. After loosening the clamp screw of the deflecting yoke, pull the yoke fully backward, and let color shading appear in a vertical belt form. 3. Pile up the clicks of the two purity magnets alternately each other, and set them to a horizontal position as an initial. 4. While opening and closing or turning the clicks of the two purity magnets, perform adjustment so that the green vertical belt appears at the center of the screen. 5. By pushing out the deflecting yoke to the front side, position the yoke so that the entire screen becomes totally green (In this case, tentatively fix the deflecting yoke with a wedge so that the yoke is not moved). 6. Set the traverse one line [SET UP] switch to the [SET UP] side to display traverse one line on the screen. With the deflecting yoke, make the traverse one line horizontal and further close to the vertical center (Do not change the cross position of the deflecting yoke) 7. Return the transverse single line [SET UP] switch to the [NORMAL] side. 	<div data-bbox="1050 770 1334 1039"> </div> <p>Align the two purity magnets to a horizontal level.</p> <p>Let the traverse one line approach between both of the white dents denoted by:</p>

Adjustment Part	Description	Remarks
	<p>8. Confirm that the purity has been attained with regard to the red, blue and monicolor rasters.</p> <p>9. Tentatively fix the deflecting yoke slightly with the clamp screw to prevent its movement in back and forth direction.</p> <p>10. Restore the wedges to the initial position and fix the deflecting yoke.</p> <p>Use three wedges of a V-form and set them respectively at an interval of about 120°. The wedges should be fixed to the Brown tube using silicon bond (KE4866)</p> <p>11. The clamp screw of the deflecting yoke should be clamped firmly with an adequate torque.</p>	<p>The wedges should be fixed at three positions at an interval of about 120°.</p> 

ADJUSTMENT OF CONVERGENCE

Adjustment Part	Description	Remarks
CONVERGENCE MAGNET	<p>ADJUSTING STEP</p> <ol style="list-style-type: none"> 1. Input the cross hatch signal. 2. Overlap the red and blue lines at the center of the screen with 4-pole magnet to turn the color to Magenta color (red/blue). 3. Next, overlap the Magenta color (red/blue) and green lines at the center of the screen with 6-pole magnet. 4. Repeat the Steps 2 and 3, and adjust the convergence of the vertical and horizontal lines at the center of the screen. 	
	<p>AFTER COMPLETION OF ADJUSTMENT</p> <ol style="list-style-type: none"> 1. Subsequent to completing adjustment of the purity and convergence, fix the six magnets using an adhesive (G2 bond or REICHLOCK). 2. Then, be sure to adjust the boards on Page 1 - 13 and after. 	

PARTS LIST

CAUTION

- The parts marked \triangle are very important for the safety. When replacing these parts, be sure to use specified ones to secure the safety and performance.
- The module circuit board is supplied together with the assembly, but the parts which do not have the drawing in this Parts List, P. C. Board Ass'y and the Parts No. columns of which are filled with lines — . will not be supplied.
- As a rule, the resistors and capacitors which are indicated as shown in (NOTE 2) "HOW TO EXPRESS PARTS NUMBERS OF STANDARD PARTS" are not shown in the list of the parts on the board.
When ordering the service parts, confirm the resistance/rated power, capacitance/rated voltage, and type of the parts, then order by the part No. indicated according to (NOTE 2).

(NOTE 1) ABBREVIATIONS OF RESISTORS, CAPACITORS AND TOLERANCES

RESISTORS		CAPACITORS	
C R	Carbon Resistor	C CAP.	Ceramic Capacitor
F R	Fusible Resistor	E CAP.	Electrolytic Capacitor
P R	Plate Resistor	M CAP.	Mylar Capacitor
V R	Variable Resistor	HV CAP.	High Voltage Capacitor
HV R	High Voltage Resistor	MF CAP.	Metalized Film Capacitor
MF R	Metal Film Resistor	MM CAP.	Metalized Mylar Capacitor
MG R	Metal Glazed Resistor	MP CAP.	Metalized Polystyrol Capacitor
MP R	Metal Plate Resistor	PP CAP.	Polypropylene Capacitor
OM R	Metal Oxide Film Resistor	PS CAP.	Polystyrol Capacitor
CMF R	Coating Metal Film Resistor	TF CAP.	Thin Film Capacitor
UNF R	Non-Flammable Resistor	MPP CAP.	Metalized Polypropylene Capacitor
CH V R	Chip Variable Resistor	TAN. CAP.	Tantalum Capacitor
CH MG R	Chip Metal Glazed Resistor	CH C CAP.	Chip Ceramic Capacitor
COMP. R	Composition Resistor	BP E CAP.	Bi-Polar Electrolytic Capacitor
LPTC R	Linear Positive Temperature Coefficient Resistor	CH AL E CAP.	Chip Aluminum Electrolytic Capacitor
		CH AL BP CAP.	Chip Aluminum Bi-Polar Capacitor
		CH TAN. E CAP.	Chip Tantalum Electrolytic Capacitor
		CH AL BP E CAP.	Chip Tantalum Bi-Polar Electrolytic Capacitor

(NOTE 2) HOW TO EXPRESS PARTS NUMBERS OF STANDARD PARTS

■ RESISTOR

Symbol	Part Name
C	COMP.R
D	C R
S	CH MG R

Symbol	Rated Power
0 1	1 w
1 2	1/2 w
1 4	1/4 w
1 6	1/6 w
1 8	1/8 w

Symbol	Shape
1	Straight lead
8	Chip

Indicate with first two-figure expressed by Ω and following 0.
 please note that, in case of resistance less than 10 Ω , a letter "R" will be effective as point.

EX.
 $2.2 \Omega = 2R2$
 $470 \Omega = 47 \times 10^1 \rightarrow 471$
 $150k\Omega = 15 \times 10^4 \rightarrow 154$

■ CAPACITOR

Symbol	Part Name
CS	C CAP.
CS	CH C CAP.
ET	E CAP.
FM	M CAP.

5Figure / 6Figure	0	1	2
A		10V	100V
C		16V	160V
D			200V
E		25V	250V
H		50V	500V
J	6.3V	63V	
V		35V	

Indicate with first two-figure expressed by pF and following 0.

Please note that, in case of capacitance less than 10 pF a letter "R" will be effective as point.

EX
 $5pF = 5R0$
 $1000pF = 10 \times 10^2 \rightarrow 102$
 $47\mu F = 47 \times 10^6 \rightarrow 476$

MODULE PC BOARD PARTS LIST

The following module pc boards are supplied as assemblies.

The component parts on the module PC boards are available only when the parts are listed in the "MODULE PRINTED CIRCUIT BOARD PARTS LIST".

SECAM MODULE PC BOARD Ass'y (SBX-S004A) within MAIN PC BOARD Ass'y.

PACKING

JVC TM-1500PS SCHEMATIC DIAGRAM

■ NOTICE

- The voltage reading and waveform are measured at each point with a multi-meter and an oscilloscope while input a video signal (color bar) through the video input terminal (INPUT A) on the monitor.
The measurements were made with each VR under the condition just after the shipment. The figures of the signal circuits may be more or less different after adjustments, so use the figures simply for reference.
- Multimeter used.
DC 20kΩ/V
Given figures are all DC voltages.
Sweep speed of oscilloscope
H → 20μS/div. V → 5mS/div.
Others — sweep speed specified
- Since the schematic diagram is a standard one, the circuit and circuit constants may be subject to change for improvement without any notice.

■ SAFETY

FR () denotes a fusible resistor which operates as a fuse. When replacing fusible resistors and parts indicated with black shading () in the circuit diagrams, be sure to ensure safety by using designated parts. As to other parts too, use designated parts to maintain safety and performance.

■ INDICATION OF PARTS SYMBOL

Inside board (Example) FX-1025A : R1209 → R209
Outside board (Example) R0001 → R01

■ SCHEMATIC DIAGRAM INDICATION

Resistor

- Resistance value
Without unit : [Ω] K : [kΩ] M : [MΩ]
- Rated allowable power
Without indication : 1/6W
- * Others Indicated
- Type
Without indication : Carbon resistor
OMR : Oxide metal film resistor
UNFR : Unflammable resistor
MFR : Metal film resistor
MPR : Metal plate resistor
FR : Fusible resistor
- * Composition resistor 1/2 [W] is indicated as 1/2S or Comp.

Capacitor

- Capacitance
Above 1 : [pF] Below 1 : [μF]
- Withstand voltage
Without indication : DC 50 [V]
Others : DC withstand voltage [V]
AC indicated : AC withstand voltage [V]
- Indications for electrolytic capacitors are as follows.
(Example)
47/50 → capacitance [μF] / withstand voltage [V]
- Type
Without indication : Ceramic capacitor
MY : Mylar capacitor
MM : Metalized mylar capacitor
PP : Polypropylene capacitor
MPP : Metalized polypropylene capacitor
MF : Metalized film capacitor
TF : Thin film capacitor
BP : Bipolar electrolytic capacitor
TAN. : Tantalum capacitor

Coil

Without unit : [μH]

Power Supply

 : B1 (110V)  : B2 (12V)

* Each voltage reading specified

Connection method

-  : Connector
-  : Receptacle
- ○ : Wrapping or soldering

Test point & GND. symbol.

-  : Test point by miniature GT pin
-  : Only test point display
-  : Live (Primary) side ground
-  : Neutral (Secondary) side ground

NOTE FOR SERVICE

This model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE (primary: ) side GND and the NEUTRAL (secondary: ) side GND.
Don't short between the LIVE side GND and NEUTRAL side GND or never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and NEUTRAL side GND at the same time.
If above note will not be kept, a fuse or any parts will be broken.

The diagram shows the main PCB assembly for the FX-1025A. The front of the board is at the top, indicated by an arrow and the label "FRONT". The board is populated with numerous integrated circuits (ICs), resistors (R), capacitors (C), and other components. Key components include:

- ICs:** IC 201, IC 203, IC 301, IC 334, IC 401, IC 501, IC 602, IC 202, IC 302, IC 402, IC 502, IC 603, IC 701, IC 702, IC 703, IC 704, IC 705, IC 706, IC 707, IC 708, IC 709, IC 710, IC 711, IC 712, IC 713, IC 714, IC 715, IC 716, IC 717, IC 718, IC 719, IC 720, IC 721, IC 722, IC 723, IC 724, IC 725, IC 726, IC 727, IC 728, IC 729, IC 730, IC 731, IC 732, IC 733, IC 734, IC 735, IC 736, IC 737, IC 738, IC 739, IC 740, IC 741, IC 742, IC 743, IC 744, IC 745, IC 746, IC 747, IC 748, IC 749, IC 750, IC 751, IC 752, IC 753, IC 754, IC 755, IC 756, IC 757, IC 758, IC 759, IC 760, IC 761, IC 762, IC 763, IC 764, IC 765, IC 766, IC 767, IC 768, IC 769, IC 770, IC 771, IC 772, IC 773, IC 774, IC 775, IC 776, IC 777, IC 778, IC 779, IC 780, IC 781, IC 782, IC 783, IC 784, IC 785, IC 786, IC 787, IC 788, IC 789, IC 790, IC 791, IC 792, IC 793, IC 794, IC 795, IC 796, IC 797, IC 798, IC 799, IC 800, IC 801, IC 802, IC 803, IC 804, IC 805, IC 806, IC 807, IC 808, IC 809, IC 810, IC 811, IC 812, IC 813, IC 814, IC 815, IC 816, IC 817, IC 818, IC 819, IC 820, IC 821, IC 822, IC 823, IC 824, IC 825, IC 826, IC 827, IC 828, IC 829, IC 830, IC 831, IC 832, IC 833, IC 834, IC 835, IC 836, IC 837, IC 838, IC 839, IC 840, IC 841, IC 842, IC 843, IC 844, IC 845, IC 846, IC 847, IC 848, IC 849, IC 850, IC 851, IC 852, IC 853, IC 854, IC 855, IC 856, IC 857, IC 858, IC 859, IC 860, IC 861, IC 862, IC 863, IC 864, IC 865, IC 866, IC 867, IC 868, IC 869, IC 870, IC 871, IC 872, IC 873, IC 874, IC 875, IC 876, IC 877, IC 878, IC 879, IC 880, IC 881, IC 882, IC 883, IC 884, IC 885, IC 886, IC 887, IC 888, IC 889, IC 890, IC 891, IC 892, IC 893, IC 894, IC 895, IC 896, IC 897, IC 898, IC 899, IC 900, IC 901, IC 902, IC 903, IC 904, IC 905, IC 906, IC 907, IC 908, IC 909, IC 910, IC 911, IC 912, IC 913, IC 914, IC 915, IC 916, IC 917, IC 918, IC 919, IC 920, IC 921, IC 922, IC 923, IC 924, IC 925, IC 926, IC 927, IC 928, IC 929, IC 930, IC 931, IC 932, IC 933, IC 934, IC 935, IC 936, IC 937, IC 938, IC 939, IC 940, IC 941, IC 942, IC 943, IC 944, IC 945, IC 946, IC 947, IC 948, IC 949, IC 950, IC 951, IC 952, IC 953, IC 954, IC 955, IC 956, IC 957, IC 958, IC 959, IC 960, IC 961, IC 962, IC 963, IC 964, IC 965, IC 966, IC 967, IC 968, IC 969, IC 970, IC 971, IC 972, IC 973, IC 974, IC 975, IC 976, IC 977, IC 978, IC 979, IC 980, IC 981, IC 982, IC 983, IC 984, IC 985, IC 986, IC 987, IC 988, IC 989, IC 990, IC 991, IC 992, IC 993, IC 994, IC 995, IC 996, IC 997, IC 998, IC 999, IC 1000.
- Resistors:** R 265, R 269, R 348, R 345, R 505, R 527, R 533A, R 501, R 412, R 409, R 413, R 401, R 402, R 403, R 404, R 405, R 406, R 407, R 408, R 409, R 410, R 411, R 412, R 413, R 414, R 415, R 416, R 417, R 418, R 419, R 420, R 421, R 422, R 423, R 424, R 425, R 426, R 427, R 428, R 429, R 430, R 431, R 432, R 433, R 434, R 435, R 436, R 437, R 438, R 439, R 440, R 441, R 442, R 443, R 444, R 445, R 446, R 447, R 448, R 449, R 450, R 451, R 452, R 453, R 454, R 455, R 456, R 457, R 458, R 459, R 460, R 461, R 462, R 463, R 464, R 465, R 466, R 467, R 468, R 469, R 470, R 471, R 472, R 473, R 474, R 475, R 476, R 477, R 478, R 479, R 480, R 481, R 482, R 483, R 484, R 485, R 486, R 487, R 488, R 489, R 490, R 491, R 492, R 493, R 494, R 495, R 496, R 497, R 498, R 499, R 500, R 501, R 502, R 503, R 504, R 505, R 506, R 507, R 508, R 509, R 510, R 511, R 512, R 513, R 514, R 515, R 516, R 517, R 518, R 519, R 520, R 521, R 522, R 523, R 524, R 525, R 526, R 527, R 528, R 529, R 530, R 531, R 532, R 533, R 534, R 535, R 536, R 537, R 538, R 539, R 540, R 541, R 542, R 543, R 544, R 545, R 546, R 547, R 548, R 549, R 550, R 551, R 552, R 553, R 554, R 555, R 556, R 557, R 558, R 559, R 560, R 561, R 562, R 563, R 564, R 565, R 566, R 567, R 568, R 569, R 570, R 571, R 572, R 573, R 574, R 575, R 576, R 577, R 578, R 579, R 580, R 581, R 582, R 583, R 584, R 585, R 586, R 587, R 588, R 589, R 590, R 591, R 592, R 593, R 594, R 595, R 596, R 597, R 598, R 599, R 600, R 601, R 602, R 603, R 604, R 605, R 606, R 607, R 608, R 609, R 610, R 611, R 612, R 613, R 614, R 615, R 616, R 617, R 618, R 619, R 620, R 621, R 622, R 623, R 624, R 625, R 626, R 627, R 628, R 629, R 630, R 631, R 632, R 633, R 634, R 635, R 636, R 637, R 638, R 639, R 640, R 641, R 642, R 643, R 644, R 645, R 646, R 647, R 648, R 649, R 650, R 651, R 652, R 653, R 654, R 655, R 656, R 657, R 658, R 659, R 660, R 661, R 662, R 663, R 664, R 665, R 666, R 667, R 668, R 669, R 670, R 671, R 672, R 673, R 674, R 675, R 676, R 677, R 678, R 679, R 680, R 681, R 682, R 683, R 684, R 685, R 686, R 687, R 688, R 689, R 690, R 691, R 692, R 693, R 694, R 695, R 696, R 697, R 698, R 699, R 700, R 701, R 702, R 703, R 704, R 705, R 706, R 707, R 708, R 709, R 710, R 711, R 712, R 713, R 714, R 715, R 716, R 717, R 718, R 719, R 720, R 721, R 722, R 723, R 724, R 725, R 726, R 727, R 728, R 729, R 730, R 731, R 732, R 733, R 734, R 735, R 736, R 737, R 738,

NOTE FOR SERVICE

This model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE (primary: \perp) side GND and the NEUTRAL (secondary: ∇) side GND. Don't short between the LIVE side GND and NEUTRAL side GND or never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and NEUTRAL side GND at the same time. If above note will not be kept, a fuse or any parts will be broken.
